

BCC 104

Dimensions:

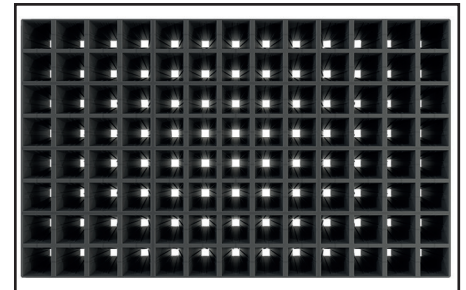

LxWxH mm	635x385x101
No. cells	104
Cells/sq.metre	425
Volume/cell	77cc
Stacking height (mm)	52mm
Root guiding rib	2 per cell wall

outer dimension: 635x385mm

eight root guiding ribs per cell

good drainage

BCC 104 growing tray is specifically designed to optimally suit growing conditions in South America. The new BCC 104 hard plastic growing tray offer growers of existing Styrofoam trays an ideal opportunity to upgrade the growing system without any investments in new equipment or new infrastructure. The BCC 104 growing tray is also suitable to serve as receiving tray in transplanting operations.

The design is optimized to help create strong and healthy plants with vital root systems. There are several root guiding ribs in each cell to guarantee a well-structured root system. The smooth inner wall surface of the cells helps improved extraction of plants.

Please contact BCC AB or your local representative for samples and prices.
