

AirBlock 121

Dimensions:

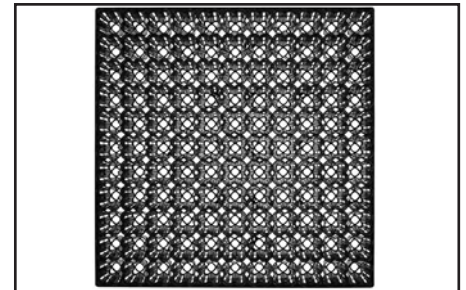

LxWxH mm	385x385x90
No. cells	121
Cells/sq.metre	816
Volume/cell	54 cc
SideSlit design	

outer dimension: 385x385mm

SideSlit design

good ventilation

AirBlock 121 is a state of art growing container. The design with square cells have a high growing density (cells/m²) and is adopted to suit nurseries with already existing infrastructure for the 385x385mm, Plantek format. The technical requirements are optimized for ease of handling and automation.

Its advanced side-slit design assures the best possible root development with a minimum of root deformation. This along with its balanced cell volume makes the product optimal for production of coniferous species both from a biological and economical perspective.
