

Hiko V-120

Dimensions:

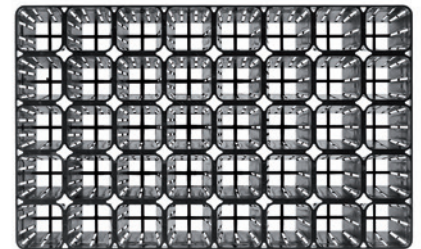

LxWxH mm	352x216x110
No. cells	40
Cells/sq.metre	526
Volume/cell	120 cc
SideSlit design	

outer dimension: 352x216mm

SideSlit design

good ventilation

Hiko V-120 SideSlit is one of the most used growing trays in Europe! It was specifically developed by growing experts in Sweden and Central Europe for the production of coniferous species in the mid-1990s and is today widely used in especially Europe, but also on other continents. Its advanced side-slit design assures the best possible root development with a minimum of root deformation. This along with its balanced cell volume makes the product optimal for production of coniferous species both from a biological and economical perspective.
