

HIKO V-1400

Dimensions:

LxWxH mm	352x216x200
No. cells	6
Cells/sq.metre	78
Volume/cell	1378

HIKO V-1400 is specifically designed to optimally suit the production of broadleaves around the world. Root-guiding ribs in each cell create active root tips. Borders at ventilation holes between cells guide water into cells instead of through the holes.

HIKO V-1400 is made from hard plastic and the features offered and the quality of the seedlings produced is consistent throughout the life span of the product. The hard plastic material used also offers increased hygiene in the nursery, an increased life span and need for less storage space, since the containers nest. In addition to this the product is 100% recyclable.

Please contact BCC AB or your local representative for samples and prices.
