outer dimension: 352x216mm

root guiding rib

good drainage

HIKO V-150 Solid cell is designed to suit the production of broadleaves around the world. The design offers optimal conditions for root development and ideal root structure. The balance between growing density and economics are carefully calculated to give grower optimal profit and supreme growing results.

In the solid version, several root-guiding ribs in each cell create active root tips.

HIKO V-150 Solid Cell is made from hard plastic and the features offered and the quality of the seedlings produced is consistent throughout the life span of the product. The hard plastic material used also offers increased hygiene in the nursery, an increased life span and need for less storage space, since the containers nest. In addition to this the product is 100% recyclable.
