outer dimension: 352x216mm

root guiding ribs

good drainage

HIKO V-25 was first developed for growing of small coniferous seedlings.

HIKO V-25 is made from hard plastic and the features offered and the quality of the seedlings produced is consistent throughout the life span of the product. The hard plastic material used also offers increased hygiene in the nursery, an increased life span and need for less storage space, since the containers nest. In addition to this the product is 100% recyclable.

Please contact BCC AB or your local representative for samples and prices.
