

Hiko V-250 Solid

Dimensions:

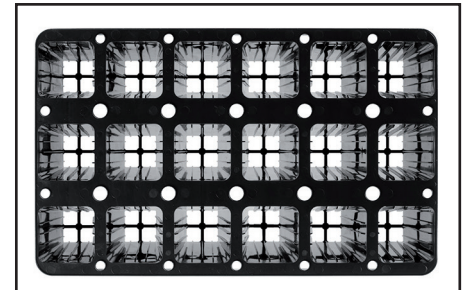

LxWxH mm	352x216x160
No. cells	18
Cells/sq.metre	243
Volume/cell	250 cc
Stacking height (mm)	50 mm
Root guiding rib	

outer dimension: 352x216mm

root guiding rib

good drainage

HIKO V-250 Solid cell is specifically designed to optimally suit the production of broadleaves around the world. The balance between growing density and economics are carefully calculated to give grower optimal profit and supreme growing results. The V-250 can with advantage also serve as the receiving tray in transplanting operations.

In the solid version, several root-guiding ribs in each cell create active root tips. In the Side Slit version, air pruning is applied to assure the best possible root development with a minimum of root deformation. Borders at ventilation holes between cells guide water into cells instead of through the holes.
