### Dimensions:

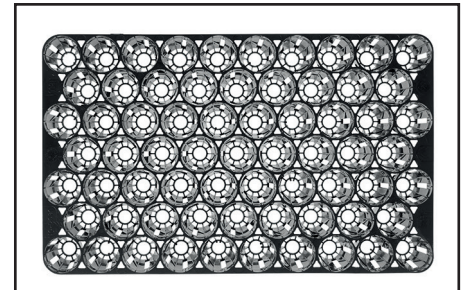

LxWxH mm	352x216x87
No. cells	67
Cells/sq.metre	88 l
Volume/cell	50 cc
SideSlit design	

*outer dimension: 352x216mm*

*SideSlit design*

*good ventilation*

**Hiko V-50 SideSlit** was first developed for growing of small coniferous seedlings in northern Sweden. Today Hiko V-50 SideSlit is widely used for growing of plug + 1 year old seedlings. Its advanced side-slit design assures the best possible root development with a minimum of root deformation. This along with its balanced cell volume makes the product optimal for production of coniferous species both from a biological and economical perspective.
