

Plantek 121F

Dimensions:

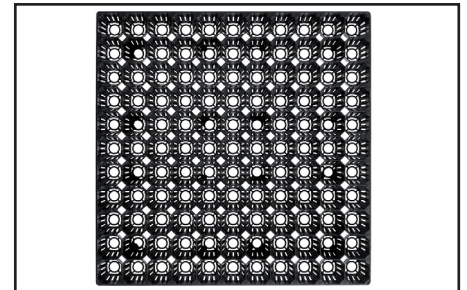

LxWxH mm	385x385x73
No. cells	121
Cells/sq.metre	820
Volume/cell	50 cc
SideSlit design	

outer dimension: 385x385mm

SideSlit design

good drainage

The Plantek containers ensure optimal utilization of the greenhouse and holding areas. Square cells have a high growing density (cells/m²) and the container is designed to minimize the risk of root bridging between cells by using the patented design of staggered side slits.

Plantek 121F is optimal to plant directly outfield in the Northern Scandinavia, Russia, etc, but can with advantage also be used in a plug+1 production, commonly used in the Baltics for example.

Please contact BCC AB or your local representative for samples and prices.
