

Plantek 64FD

Dimensions:

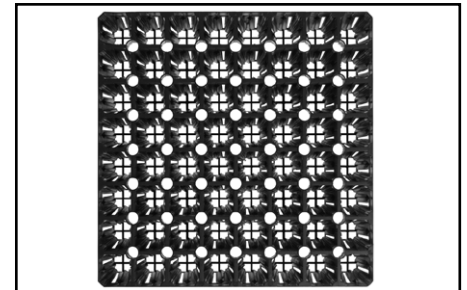

LxWxH mm	385x385x110
No. cells	64
Cells/sq.metre	434
Volume/cell	128 cc
SideSlit design	
Active root guiding	

outer dimension: 385x385mm

Active root guiding & SideSlit design

good ventilation

The Plantek family is one of the most used growing trays in Northern Europe. The design of Plantek growing containers not only meet biological specifications but also the technical requirements for ease of handling and automation.

Plantek 64FD has a design specially developed by growing experts in Northern Europe. The special design with active root guiding ribs directs the roots to the side-slits which help the plant to create superior lateral roots with active root tips. A seedling with active roots, in many directions, contributes in a very positive way to improved establishment in field and to the stability of the growing tree.
